Rotary Switches
AC09, 16 and 32

Digital code output type

■ Description
FUJI AC series rotary switches offer a wide choice of output codes. They feature sliding Au-flashed contacts for high contact reliability. Inhibitor and parity check circuits guard against switch malfunctions caused by error signals. With only seven connections to make, these switches are an economical solution to multiposition switching needs.

■ Features
● Au-flashed contacts for high contact reliability.

● The protection of operator section meets the IP65 (IEC), so these switches can be used in oil-splash environments, such as on machine tool control panels. (Except for AC32)
● A wide choice of output codes fits a broad range of applications. Available step angles are 15, 30, and 360°/26 (13.85°). Real binary code, complementary binary code, and real gray code are available.
● Switches are available with connectors or with lock rings for easy handling.
● Stopper screw positions are user selectable.

■ **Installation**
AC09

Pass the switch body through the hole from the back of the panel, and secure it by tightening the hexagonal nut with a flat washer and a toothed lock washer.
The recommended tightening torque for the hexagonal nut is 1.5 to 2N·m.
Insert the lock ring (ACX001) between the panel and the flat washer, and the adhesive lock ring (ACX001A) between the switch body and the panel.
AC16

Pass the switch body with a bezel through the hole from the back of the panel, and secure it with a ϕ16 mounting nut. The recommended tightening torque for the nut is 0.6 to 1N·m.

AC32

Pass the switch body through the hole from the back of the panel, and secure it with two flat head screws from the face of the panel. The recommended tightening torque for the flat head screws is 0.3 to 0.5N·m.

■ **Notes on use**
1. Connecting wires
Note the following points when soldering:
● The power of the soldering iron must not be over 30W.
● Use solder with resin flux core.
● Complete soldering within 5 seconds if using a 30W soldering iron, or within 10 seconds if using a 20W soldering iron.

2. Note on the case linkage

3. Number of stopper screws shipped
● AC09 and AC32
● Step angle: 30° (symbol X)
  Positions 0/11 (0 to 11): one screw. User-selectable start and stop positions: two screws (one for start position, one for end position).
● Step angle: 15° (symbol Y)
  Positions 0/22 (0 to 22): one screw. User-selectable start and stop positions: two screws (one for start position, one for end position).
● Step angle: 360°/26 (symbol Z)
  Positions 0/24 (0 to 24): one screw. User-selectable start and stop positions: two screws (one for start position, one for end position).
● AC16
  Customers can specify the stopper screw positions. The switch is then shipped with stopper screws already in the specified positions.

4. Stopper screw positions
Insert stopper screws into the switch body holes marked with letters, as shown in the insertion example on the right. These tables below show that the start position stopper screw is inserted in the hole on the left of the position setting and the end positions stopper screw is inserted in the hole on the right.

If step angle X (30°) or Y (15°) is specified.

If step angle W (360°/13) or Z (360°/26) is specified.
5. Installing a stopper screw
The maximum tightening torque for a stopper screw is 0.1N·m. Screw the stopper screw into position until it hits the body frame rib. Do not overtighten the screw.
